

Construction Risk Job Safety Analysis

This Job Safety Analysis (JSA) must be completed by the contractor and approved by the Argonne project specialist/technical representative before work can begin. It is designed to be completed electronically and must be printed and displayed at the work site. A Job Safety Analysis (JSA) is an important accident prevention tool that identifies hazards so they can be eliminated or minimized before a job is performed and before a hazard can have an impact on workers. The scope of work and all SDSs must be attached before this JSA can be reviewed and signed.
